

Introduction to Disciplined Agile Delivery

Duration:
2 days
Course Delivery:
Classroom

Course Overview:

Agile is an evolutionary approach to system development that focuses on the regular delivery of high-quality software in a timely and cost efficient manner, with just enough ceremony, and which meets the changing needs of its stakeholders. Agile software development offers the potential for significant process improvement if you adopt it properly, but can cause significant disruption if you adopt it improperly. This workshop provides an overview of a disciplined, full-lifecycle approach to agile software delivery. It teaches you to successfully apply fundamental agile techniques throughout the software delivery lifecycle.

Audience:

This intermediate course is for:

- Developers
- Quality professionals
- Project Managers
- Data professionals
- Architects

Prerequisites:

You should have:

- Understanding of the values and principles of the Agile Manifesto
- Read The Agile Scaling Model (ASM): Adapting Agile Methods for Complex Environments

Skills Taught:

- Explain the fundamentals of agile software delivery
- Explain the disciplined agile delivery lifecycle
- Demonstrate the difference between Scrum and Disciplined Agile Delivery
- Describe common agile practices and techniques
- Apply common agile techniques to a simulated project
- Explore how you can become more agile on your projects

Course Outline:

- Introduction to Agile
- From Scrum to Disciplined Agile Delivery
- Roles on agile teams
- Initiating an agile project
- Eliminating risk early in a project
- Agile construction
- Releasing a system into production
